Economic and Market Commentary: Pay attention to what the Fed does, not says

October 1, 2017

Last month, Fed Chair Janet Yellen put on her academic mortarboard and delivered a history lesson. Last week, she traded it for a Sherlock Holmes houndstooth hat for “The Case of the Missing Inflation”: “The shortfall in inflation is a mystery,” she said in a speech in Ohio.

She and other economists may be frustrated that things aren’t following their equations, but they seem to be pretty comfortable that inflation is either at or near enough to their target to keep tightening. In any case, cash managers tend to look at what Federal Reserve policymakers do, not what they say. With four rate hikes in the last two years, and a fifth likely coming in December, it would seem the Federal Open Market Committee (FOMC) participants think they won’t need a sleuth with a magnifying glass to find rising prices and wages.

If we needed another clue to their thinking, the Fed officially announced that in October—today, actually—it will begin to pare its massive balance sheet, a sign that extraordinary accommodation is coming to an end. Nearly everyone else in the industry expected this move—it was just a matter of when it would happen—so there wasn’t a negative market reaction.

**Definition of Weighted Average Maturity and Weighted Average Life

WAM is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

WAL is calculated in the same manner as WAM, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.

We can't help but wonder if Yellen factored in her legacy with the start of tapering. With this, she will get credit for reversing nearly all of the post-recession monetary policies. But it also was just time to start normalization. The Fed is not comfortable holding such a large amount of assets, and if they didn't start to reduce it soon, it would have begun to fester.

With only \$10 billion rolled off each month for now, the taper is modest. Its main effect on money markets is operational, as it increases the supply of Treasury bills in the marketplace, which is a good thing. There won't be any lack of demand for the extra supply, even as the amount increases in coming quarters.

Meanwhile, the Fed's economic projections released at the last policy meeting suggest another 25 basis-point hike is on the table this year. We have thought so for some time now, and the market has returned to that opinion after doubting it. There will be some noise, both from the aftermath of the destructive hurricanes and the postponed debate over the federal budget and debt ceiling, but that shouldn't make a major difference. We already have seen more value come back into the yield curve: a slight steepening that has made 3- and 6-month fixed-rate paper attractive along with floaters. We have therefore kept the weighted average maturity for TexPool at 37 days and 51 days for TexPool Prime.

The short end of the Treasury curve rose slightly in September, with 1-month and 3-month Treasury yields rising from 0.96% to 0.97%

90-Day Treasury Bill is a short-term debt instrument backed by the national government. These are used to collect immediate cash to meet outstanding obligations.

Any private investor can invest in a Treasury bill. The 90-Day Treasury Bill is a weighted average rate of the weekly auctions of 90-Day Treasury Bills.

Past performance is no guarantee of future results.

and 1.02% to 1.05%, respectively. The London interbank offered rate (Libor) did not move materially over September, with 1-month Libor remaining at 1.23%, 3-month at 1.34% and 6-month at 1.51%.
